Arbor

Web Data Scraping Specialist

Hello,

I came across the open role at Arbor on LinkedIn. Going through the Job Description thoroughly, I realized that requirements and responsibilities associated with the role are inline with my future aspirations. I'll be pleased to add value and solve complex problems at your organization.

In the past I have actively worked in data acquisition. Working at India's one of the leading data science company, I have performed large scale web scraping from a plethora of E-commerce websites. In my journey i have encountered and solved multiple crawling issues like Captchas, Language barriers, Lazy loading, and parsing complex DOM elements.

My technical skills include Python, Nodejs, Javascript, Java and Angular. I have worked extensively with web scraping libraries like selenium, chromedriver, scrapy and BeautifulSoup. I am also enthusiastic about financial markets and actively follow it. I have developed crawling scripts for multiple ecommerce websites to help brands track their share of visibility across etailers and countries.

For a greater presentation of my background and qualifications, please review my attached resume. I am eager to speak with you and greatly appreciate your consideration.

Sincerely,

Bhargav Sarvaria
